

Yash Sodvadiya

Platform Engineer

USA | +1 (857) 381-3117 | Email: yash.sodvadiya46@gmail.com | LinkedIn

SUMMARY

Platform & Cloud Engineer with 4+ years of experience designing, deploying, and operating scalable Internal Developer Platforms (IDP), cloud-native infrastructure, and DevOps solutions across AWS, Azure, and GCP environments. Expertise in Kubernetes, Terraform, CI/CD platforms, observability engineering, Infrastructure as Code (IaC), and automation with strong focus on developer experience, platform reliability, operational scalability, and self-service infrastructure capabilities. Proven success in building standardized deployment patterns, reducing operational toil, improving platform adoption, and implementing secure, highly available enterprise cloud architectures aligned with HIPAA, SOC2, ISO 27001, and NIST standards.

PROFESSIONAL EXPERIENCE

Platform Engineer | Humana | USA

April 2025 – Current

- Architected and deployed scalable, HIPAA-compliant cloud environments on AWS and Azure using EC2, RDS, Lambda, and VPCs, ensuring 99.99% uptime for healthcare applications while meeting SOC2 and NIST compliance standards.
- Built reusable Infrastructure-as-Code platform modules using Terraform, CloudFormation, and Ansible, enabling self-service provisioning, standardized deployment patterns, and multi-region consistency while reducing manual operational effort by 55%.
- Engineered Kubernetes-based platform services using Docker, Kubernetes (EKS), and Helm Charts, implementing auto-scaling, service discovery, ingress controls, and deployment guardrails to improve reliability and operational consistency.
- Designed reusable CI/CD platform capabilities using Jenkins and GitHub Actions, enabling engineering teams to perform secure self-service deployments with integrated SonarQube scans, Trivy validation, approval gates, and standardized release workflows.
- Built paved-road deployment patterns using Kubernetes, Helm, and Terraform modules that reduced developer onboarding complexity and improved deployment consistency across microservices environments.
- Partnered with application and security teams to establish platform engineering standards for observability, deployment reliability, infrastructure governance, and developer experience across AWS and Azure environments.
- Defined and monitored SLIs/SLOs for shared cloud services using Prometheus, Grafana, and Datadog, improving platform reliability, reducing alert fatigue, and supporting proactive incident management workflows.
- Reduced operational toil through automation and standardization initiatives, improving deployment velocity, release stability, and infrastructure scalability across distributed cloud workloads.
- Led platform-level incident troubleshooting, root cause analysis, and reliability improvement initiatives, driving long-term operational resilience and reducing recurring production incidents.
- Supported zero-downtime application deployments, rolling upgrades, and infrastructure migrations for business-critical production workloads.

Cloud Engineer | Humana (Internship) | USA

Aug 2024 – Dec 2024

- Developed Python-based automation solutions for cloud monitoring, backup validation, infrastructure auditing, and cost optimization, reducing operational overhead by 35%.
- Designed and standardized observability platforms using Prometheus, Grafana, Datadog, and CloudWatch with centralized logging, automated alerting, and SLI tracking, improving platform reliability and reducing MTTD by 45%.
- Collaborated with DevOps, Security, and Data Engineering teams to define IAM roles, encryption policies, and access controls, ensuring alignment with enterprise data governance and HIPAA regulations.
- Led migration of legacy on-prem analytics workloads to AWS Redshift and Azure Synapse, improving query performance by 60% and enabling predictive insights for patient care dashboards.

Cloud & DevOps Engineer | Hexaware Technologies | India

May 2021 – Aug 2023

- Designed and implemented multi-tenant cloud solutions on AWS and Azure for BFSI clients, automating provisioning via Terraform and CloudFormation, which reduced environment setup time from 5 days to under 8 hours.
- Engineered Kubernetes-based microservices platforms using Docker and AKS, implementing auto-scaling, ingress management, and service discovery for high availability applications.
- Built and maintained CI/CD pipelines using Jenkins, Azure DevOps, GitLab CI, and GitHub Actions, reducing deployment lead time by 40% and improving release reliability.
- Configured centralized logging and monitoring using ELK Stack and CloudWatch, building proactive alerting dashboards that improved visibility into application performance and reduced incident resolution time by 25%.
- Developed Python, Bash, and PowerShell automation scripts for infrastructure provisioning, deployment orchestration, cloud operations, and cost optimization, improving operational efficiency by 50%.
- Implemented cloud security best practices including IAM governance, WAF policies, encrypted storage, vulnerability scanning, and compliance controls aligned with ISO 27001 standards.
- Led migration of legacy Java and .NET applications from on-prem infrastructure to AWS cloud environments, improving application performance, scalability, and operational efficiency.

TECHNICAL SKILLS

- Cloud Platforms:** AWS (EC2, S3, Lambda, RDS, CloudFormation, CloudWatch, IAM, VPC, SNS/SQS, EKS), Azure (AKS, Azure Functions, Azure SQL Blob, Synapse, ARM Templates), GCP (GCE, GKE, BigQuery, Cloud Storage, Compute Engine)
- Platform Engineering & SRE:** SLIs/SLOs, Error Budget Monitoring, Incident Management, Platform Reliability Engineering, Developer Experience, Operational Toil Reduction, Platform Standardization, SRE, IDP, Self Service Infrastructure
- Infrastructure as Code (IaC):** Terraform, AWS CloudFormation, Azure ARM Templates, Ansible, Pulumi
- Containers & Orchestration:** Docker, Kubernetes (EKS/AKS/GKE), Helm Charts, OpenShift, Service Discovery, Cloud native Architecture
- CI/CD & Automation:** Jenkins, GitHub Actions, GitLab CI, Azure DevOps, ArgoCD, Spinnaker
- Scripting & Programming:** Python, Bash, PowerShell, YAML, Groovy
- Security & Compliance:** IAM, WAF, VPN, SSL/TLS, Security Groups, Azure Defender, Vulnerability Scanning, HIPAA, SOC2, ISO 27001, GDPR, CIS Benchmarks, NIST 800-53
- Monitoring, Logging & Observability:** Prometheus, Grafana, ELK Stack, CloudWatch, Datadog, Splunk, New Relic
- Storage & Databases:** Amazon RDS, DynamoDB, Azure SQL, MongoDB, PostgreSQL, Redis, Elasticache, PostgreSQL
- OS & Virtualization:** Linux (RHEL, Ubuntu), Windows Server, VMware ESXi, Hyper-V
- DevOps & Collaboration Tools:** Git, Bitbucket, Jira, Confluence, ServiceNow, HashiCorp Vault, Consul

EDUCATION

Master of professional studies (MPS) in informatics NORTHEASTERN UNIVERSITY, BOSTON, MA, USA	Sept 2023 – April 2025
Bachelors of Computer Application RK UNIVERSITY, RAJKOT, INDIA	April 2019 - Mar 2022
